

# Saturn Installation Guide

## Check all components

\*Please check all components are included in the package before you go through.

Saturn x 2

M8 self-locking nut x 2  
Terminal x 4

Dressup sticker x 1

## Installation

\*Ask local dealer for assistance if you are not familiar with mechanical engineering.

\*Any damage will occur due to inappropriate installation or assembly.

Separate the wire between original indicators and your bike, make sure the length is just right in the position. Disassemble the indicators from your bike, and then mount the Saturn into the position.

Please make sure the Saturn is tightly fastened by M8 self-locking nut.

Install your new indicator on the Saturn and then adjust the indicator to proper position.

+ You can find many innovative indicator models in XENOLEN product line, visit [xenolen.com](http://xenolen.com) for more info.

+ For a safety ride, always make sure the lighting direction is horizontal and parallel to your bike.

+ More information please refer to [www.eur-lex.europa.eu](http://www.eur-lex.europa.eu).

## Test and Ride

\*All operation and usage on road driving should always follow the law restricted by each country

After installing the Saturn and finishing the wire connecting from the indicator to bike.

You can give a quick test to the indicators. With correct function you can see comfortable flash with turn signal.

Please check the whole indicator structure is firmly located in right position before your every trip.

This is for your safety driving.
